

## INDUSTRY SPEAKERS AND WORKSHOP

AECOM

# AECOM

AECOM is a global network of experts working with clients and communities to develop and implement innovative solutions to the world's most complex environmental engineering challenges.

### STUDENT HIGHLIGHTS

- It was interesting to hear from women in engineering and the different pathways there are within engineering as a whole. I learnt that it can have a lot to do with architecture and can be very artistic
- I have gained a lot more knowledge with not only engineering itself but how important every little job is – that ends up with a building. I found the projects the engineers did quite fascinating as well.
- I learnt about some of the types of engineering and the jobs involved. I also learnt about some of the responsibilities of the job and how engineering can change the world.
- I learnt a lot more about the opportunities science and engineering degrees can offer you. I also learnt about some more of the different jobs you can get at engineering companies
- I learnt lots more about the different jobs involving engineering. I learnt about the way engineering connects many things within our lives. I never knew how many projects and buildings AECOM contribute to.
- I really liked doing the bridge activity. Our group worked really well together and we balanced about 8 packs of paper on our bridge. I also liked listening to all the girls speak about engineering and it was quite inspiring.
- I learnt about different people and how they got into their careers. It was interesting to hear about how engineering is impacting the world that we live in.
- I found it really interesting to learn about all the different types of engineering that goes into everything from bridges to 42 story buildings and how a building is designed to increase productivity.
- I learnt how much fun bridge engineering is and also about structure design.
